

Summary

Passionate and results-driven IT professional with hands-on experience in developing scalable web applications using Java, Spring Boot, Angular, React, Mysql, Skilled in both front-end and back-end development, including user interface design, database management, and server-side technologies. Expertise in optimizing performance, implementing clean architecture, and ensuring high-quality code. A quick learner with excellent problem-solving abilities, eager to continue growing and driving success in a software engineering role.

Technical skills

- **Programming Languages:** Java, JavaScript, TypeScript.
- **Databases:** MSSQL, MYSQL, Redshift
- **Web Development:** Angular, ReactJS, HTML, CSS
- **Platform:** Windows
- **Framework:** SpringBoot, Feign Client, Kafka basics
- **Testing Framework:** JUnit

Education

2022-B.E(Electronics and Communication Engineering)-S.K.R Engineering College-Anna University.

Languages

- English
- Tamil
- Telugu

EXPERIENCE

Grid Dynamics India Ltd, Chennai, India

Apr 2023 - June 2025

Role: Software Engineer

NextSphere Technologies (India) Pvt Ltd, Chennai, India

Nov 2022 - Mar 2023

Role: Associate Software Engineer

PROJECTS

Project Title

FLP360 Ongoing Features and Improvements Jan 2024 – June 2025

Project Description

FLP360 project is a report-based web and mobile application. The FLP360 application contains reports about Forever Business Owners (FBO). Reports we show to users are volume, orders, earnings, Incentives, Advanced Reports, etc... This project is developed using Angular as a Front-End and Spring Boot as a Back end and we use amazon redshift for database connection.

Roles and Responsibilities

- Responsible for designing and implementing new web API endpoints to support data aggregation in the FLP360 project, ensuring efficient data retrieval and management.
- Create custom queries to prevent gateway timeout errors in the FLP360 project, optimizing database interactions for improved performance and reliability.
- Effectively optimized database queries, resulting in reduced page load times and significantly improving the overall user experience.
- Addressed and resolved production issues efficiently, reducing downtime and ensuring continuous operational efficiency.

Technologies

- Database: MySQL, RedShift
- Front-end: Angular
- Back-end: Java, Spring Boot

Project Title (Internal Project)

NS Dinner Application [May 2023-Aug 2023]

Project Description

NS Dinner Application simplifies the dinner order process for employees by enabling them to log in and select their preferred meals by searching for various meals from a menu of options based on categories, add the food to cart, employees can also update their cart such as update quantity, remove the selected food and cancel their order. This eliminates the need for manual order collection and the workload of security personnel.

Admin can view food and place orders, admin can also insert new food details, update existing food details, download the ordered food details in excel or pdf format based on employee name, date range and category.

Roles and Responsibilities

- Designed and developed View Order Component in that admin can view the ordered food history by sorting category and by selecting floor using React.
- Developed Table to display the ordered food history along with pagination based on sorted date and based on sorted floor.
- Using MSSQL created a stored procedure to store records in database.

Technologies

- Database: MSSQL
- Front-end: React JS, HTML, CSS

Project Title (Mock Project)

Online Food Ordering System [Mar 2023-Apr 2023]

Project Description

- Online Food Ordering System is a web-based platform using React JS and JSON server that allows users to view food details, search for food, add items to their cart and order food.
- Admin can insert, view, update, delete food and admin can also order food.

Roles and Responsibilities

- Implemented Admin portal to view food, insert new food, update existing food, delete the existing food and place order. User portal to view food, add the food to cart, place orders using React.
- I have done private routing for security purposes.
- Used JSON server to securely store and manage essential details for the Online Food Ordering System.

Technologies

- Database: JSON Server
- Front-end: React JS, HTML, CSS

Role: Trainee Software Engineer

In the Training Period, I have acquired Knowledge on several programming languages, frameworks and web technologies, with this skill I have gained practical experience and a strong understanding, and I have done an Internal Project.

Project Title

Online Food Ordering System Feb 2023-Mar 2023

Project Description

- Online Food Ordering System is a web-based platform using Spring Boot, Angular and MySQL, that allows users to view food details and add items to their cart.
- Admin can insert new food, view food, update the existing food and delete food.

Roles and Responsibilities

- Implemented Admin portal to view food, insert new food, update existing food, delete the existing food and place order. User portal to view food and place orders using Angular.
- Designed and developed backend using Spring Boot.
- Created a database using MySQL to securely store and manage essential details for the Online Food Ordering System.
- Used CSS and Bootstrap for Styling.

Technologies

- Database: MySQL
- Front-end: Angular, Bootstrap, HTML, CSS
- Back-end: Spring Boot
